## Safety Standards for Canadian Swimming Pools and Waterfronts Aquatic Facility Standard

### Do Not Resuscitate Standard

#### Standard

Aquatic personnel shall continue with resuscitation efforts including Cardiopulmonary Resuscitation (CPR) even when presented with a Do Not Resuscitate (DNR) order. Only when directed by EMS or other authorized medical personnel, shall resuscitation efforts including CPR cease.

#### Definitions

**Do Not Resuscitate (DNR) order:** An order not to attempt CPR in the event a patient suffers cardiac or respiratory arrest.

**Cardiopulmonary Resuscitation (CPR):** Measures to restore cardiac function or to support ventilation in the event of a cardiac or respiratory arrest. Examples include: mouth-to-mouth rescue breathing, direct cardiac injection, electrical defibrillation, and open chest cardiac massage.

#### Rationale

- Lifeguards are not health care workers and it is not expected that lifeguards would be aware of all the requirements and stipulations that would make a DNR request valid or invalid.
- There is no legislation in Canada that directs lay rescuers to comply with a Personal Directive.
- In Canada, such a direction is legally made by way of a Personal Directive in which the person appoints an agent to make health care decisions for them when they are incapable of doing so themselves. It is unlikely that the appointed agent

will be available at an aquatic facility to direct staff as to the individual's "Do Not Resuscitate" request. It would be most common for Personal Directives to be dealt with in a hospital situation under the guidance of a qualified medical practitioner.

- Most Personal Directives are more complex than “do not provide CPR”. There are many different levels of intervention which can be set out in a Personal Directive and can be time consuming to read and difficult to understand by the lay rescuer. It is virtually impossible for a certified National Lifeguard to have access to information and planning done by the patient.

## Implementation

- Develop a written policy that outlines how facility staff will respond to a patron who presents a DNR.
- Train staff on the facility policy regarding DNRs.

## Approval

- Approved by the Lifesaving Society Canada Board of Directors on 8 May 2016.

## Disclaimer

Lifesaving Society Canada's National Safety Standards are developed using Coroners' recommendations, the latest evidence-based research, and reflect the aquatic industry's best practices at the time the publication was approved or revised.

The purpose of these standards is to encourage swimming pool, waterpark and waterfront owners, managers, operators and regulators to adopt these standards in order to prevent drownings in aquatic environments.

Lifesaving Society Canada's National Safety Standards do not replace or supersede local, provincial/territorial or federal legislation or regulations, but they are considered the standard to which aquatic facility operators should work towards in order to enhance safety within their operations and to prevent drowning and aquatic-related injury.
